PROFESSIONAL SUMMARY

Frontend developer who enjoys building responsive and user-friendly web applications. I started learning web development in 2024 and have been improving my skills through hands-on projects using HTML, CSS, and JavaScript. Most of my projects focus on responsive layouts, API integration, browser storage handling, and clean UI structure. I prefer learning by building real applications because it helps me understand practical frontend development and problem solving. Currently looking for an internship or junior frontend role where I can continue learning while contributing to real-world projects.

EDUCATION

BS Computer Science (2023 – Present)

University of Agriculture, Faisalabad

GPA: 3.05 | 6th Semester

Currently studying subjects related to programming, data structures, software development, and databases. Alongside academics, I spend most of my time improving frontend development skills through projects and self-learning.

FSc Pre-Engineering (2021 – 2023)

Govt. Degree College Fazil Pur

Marks: 753/1100

Studied mathematics and science subjects which improved logical thinking and analytical skills.

Matriculation (2019 – 2021)

Government High School Mehrewala

Marks: 918/1100

Completed school education with strong academic performance in science subjects.

TECHNICAL SKILLS

Frontend Development: HTML5, CSS3, JavaScript (ES6+), Tailwind CSS, Bootstrap

Core Concepts: Responsive Design, Flexbox, CSS Grid, DOM Manipulation, Event Handling, API Integration

Tools & Platforms: Git, GitHub, VS Code, Netlify, Vercel

Other Languages: Python (basic), C++, C#

Currently Learning: React.js, Node.js

PROJECTS

Weather App

Built a real-time weather application using API integration. Users can search cities and view weather details including temperature, wind speed, humidity, and feels like conditions. Implemented LocalStorage to save the last searched city which improves user experience after refreshing the page. Focused on responsive UI and clean design for better usability.

Live Demo: magical-dasik-d81b09.netlify.app

GitHub: github.com/Fury85/Weather-App

Movie Search App

Developed a movie search application where users can search and explore movies dynamically. Displays details such as title, genre, release date, and movie posters. Focused on clean layout structure and organized data presentation similar to real movie platforms.

Portfolio Website

Created a responsive portfolio website to present projects and technical skills professionally. Focused on clean navigation, readable layout, and mobile-friendly design.

Twitter Clone (UI)

Built a Twitter-inspired frontend layout with navigation sidebar, feed section, and responsive structure. Used Tailwind CSS to improve component organization and layout consistency.

Spotify Clone (UI)

Designed a Spotify-inspired music player interface with sidebar navigation and playlist sections. Practiced Flexbox and Grid to improve frontend layout skills.

Todo App

Created a task management application where users can add and delete tasks dynamically. Used LocalStorage to save task data inside the browser.

Calculator App

Built a calculator application capable of handling arithmetic operations and edge cases like division by zero.

SOFT SKILLS

Problem Solving, Communication, Team Collaboration, Adaptability, Consistency, Willingness to Learn

LANGUAGES

Urdu (Native) | English (Fluent)
